

***Involved in vehicle assembly?***

***The process expertise of SI Systems could really take you places.***

CARTRAC<sup>®</sup>-HD technology from SI Systems delivers a reliable product flow to interface with other components with extreme accuracy to within  $\pm .005"$ . This precise adherence to tolerance specs has allowed companies like General Motors to improve efficiency more than 20%.

## SI Systems. Our experience drives the vehicle assembly market.

If it moves on roads, grass, snow or water, there's a good chance its first ride came on a material handling system designed by SI Systems.

Lawn mowers and leisure craft. Cars and campers. Motorcycles and motor homes. Trucks and tractors. SI Systems has had a hand in putting them all together.

In industry today, vehicle assembly and sub-assembly operations are under terrific pressure to cut costs and keep up with increased demand, often at the same time. Under these conditions, material handling systems must function at peak efficiency. And SI Systems is uniquely qualified to help make that happen.

Our deep and diverse experience allows us to develop complete solutions from scratch, or refine and "troubleshoot" existing systems. We're experts on integrated technologies, having installed systems covering virtually every kind of operation from light assembly of components to movement of the heaviest unit loads. SI Systems solutions are at work in every environment, from harsh foundry conditions to the unique demands of specialized assembly.

**The experience to know what works—then improve upon it.** Our experience gives us an unmatched ability to meet your specific needs. We will specify the appropriate system to do the best job in your particular application, just as we have for John Deere, Harley-Davidson, and many others.

We have developed some of the most reliable technologies in the business. Our CARTRAC family of spinning tube conveyor systems excels in both accuracy and throughput, and it interfaces smoothly with both human and automated system components. It is available in several configurations for different needs and load sizes.

SI Systems is the world's largest provider of in-floor towline conveyor systems. Our Lo-Tow® technology has proven its reliability in installations around the globe, where clients have saved money by virtually eliminating downtime and reducing maintenance costs. These installations have a long-term track record of dependability, with many of our systems in operation for over 20 years.

**Integration for your system. Improvement for your productivity.** When coupled with SI Systems integrated software solutions, our technologies can be paced to provide synchronous or non-synchronous assembly and manufacturing. Line performance will be improved, ergonomics and safety enhanced, and workers' compensation claims reduced.

Whether your needs call for CARTRAC, Lo-Tow, or another SI Systems technology, you can be sure those needs will be met with maximum efficiency, reliability, and economy.

*Our Lo-Tow® Technology means near 100 percent uptime for our customers.*

## Chances are, we've already solved your problem in vehicle assembly.

Why guess at how much experience your material handling provider has in your business? SI Systems has a level of proficiency others would be hard-pressed to match. Let us examine your operation, and see how your material handling system can be updated or enhanced to deliver maximum profitability.

You're in good company, because *we're in great companies!*

- General Motors
- Ford
- Harley-Davidson
- John Deere
- Peterbilt Truck
- Kenworth Truck
- Case/New Holland
- Daimler/Chrysler
- Cummins Engine
- Oshkosh Truck
- McNeilus Truck
- JLG
